Clayton Christensen’s Theory of Disruptive Innovation

a. A disruptive innovation reaches the point where it can satisfy the least demanding customers; least demanding customers drop the established, higher performing option on the basis of other factors (cost, convenience, etc.).

b. The established product exceeds the needs of the most demanding customers; sustaining innovations now fuel “performance oversupply.”

c. The disruptive innovation meets the level of performance required by the most demanding customers; those customers drop the established option on the basis of other factors.

Clayton Christensen’s Theory of Disruptive Innovation

A disruptive innovation reaches the point where it can satisfy the least demanding customers; least demanding customers drop the established, higher performing option on the basis of other factors (cost, convenience, etc.).

The established product exceeds the needs of the most demanding customers; sustaining innovations now fuel “performance oversupply.”

The disruptive innovation meets the level of performance required by the most demanding customers; those customers drop the established option on the basis of other factors.

Clayton Christensen’s Theory of Disruptive Innovation
